**DETAILED ACTION**

1. Claims 1-14 and 16-21 are pending in the application.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Ushirokawa (US patent number 5,644,603, newly cited).

4. Ushirokawa teaches a reduced state sequence estimator comprising:  
determining the value of a previous symbol from the sequence of symbols (see response from the channel estimates symbols in figures 5A and 5B); and generating reduced trellis (see Viterbi equalizer 103) by calculating only path metrics for states in which the previous symbol having response higher than predetermined power level shown in figures 5A and 5B.

***Response to Amendment***

5. Applicant's arguments with respect to claim 5 have been considered but are moot in view of the new ground(s) of rejection.

***Allowable Subject Matter***

6. Claims 1-4, 11-14 and 16-21 are allowed.
7. Claims 6-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US patent number 5,644,603 issued to Wales discloses a Viterbi equalizer for equalizing the received signal according to the estimated channel response.

IEEE publication, "Reduced-States Sequence Estimation with Tap-Selectable Decision Feedback," to Erich et al. discloses a reduced state Viterbi Equalizer.
